

ODEO FLARE

#1 IN ELECTRONIC FLARES

Mk3 LED Odeo Flare (eVDS)

THE SAFE, LIGHTWEIGHT, WATERPROOF, HIGH PERFORMANCE RED LED FLARE.

The new Mk3 Red LED eVDS (electronic Visual Distress Signal) offers the same enhanced safety as the multi award winning Mk2 which has proved itself as the safe, reliable alternative to handheld pyrotechnic flares.

- No Heat
- No Flames
- No explosives
- Full hemisphere of light
- 6 hours per set of batteries
- Visible at over 3 miles

The Mk3 makes the SOS signal as defined in Annex 4 of COLREGS while also producing a piercing and attention grabbing light throughout the full hemisphere, replicating the light pattern of a handheld pyrotechnic flare.

Powered by 3 AA L91 Lithium batteries, the Mk3 has at least 6 hours constant run time on one set of batteries which are easily replaced for extended use. The base cap is fitted with a tripod mount to aid extended use.

The Mk3 is a safe, lightweight, high performance, waterproof, red LED flare. It is easy to use and designed to work in the most challenging of environments, either at sea or on land and unlike pyrotechnic flares, can be safely carried on aircraft.
